

MEET VAGHANI

ESG & Climate Data Analyst

Bhavnagar, India (open to relocation) | meet.vaghani9909@gmail.com | +91 9409417490 | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

ESG and climate data professional who builds the data systems behind carbon and sustainability reporting, using Python, SQL, and Excel to turn raw plant and company data into accurate, traceable figures. Developed a CBAM compliance monitoring and reporting platform for a cement industry association, guarded by 1,100+ automated tests, and two free tools, including a BRSR reporting platform with 55 early-adopter sign-ups. Brings 3+ years of compliance and operations leadership in a regulated, audit-driven business, plus practical command of GHG accounting and the major ESG frameworks (BRSR, GRI, SASB, TCFD, ISSB). Certified ESG Professional and Gold Medalist, IIM Bangalore; completing a Data Science, AI & Generative AI programme.

CORE SKILLS

- **Programming & Databases:** Python, SQL (SQLite: schema design, migrations, joins, transactions), TypeScript, Git
- **Python Libraries:** pandas, openpyxl, pytest, Streamlit, fpdf2, Pillow
- **Analytics & BI:** Microsoft Excel (advanced), Power BI, KPI and MIS reporting, data visualisation
- **Data Engineering & Automation:** ETL pipelines, data modelling, data validation and reconciliation, audit trails, automated testing, CI (GitHub Actions), automated PDF and Excel reporting
- **AI & Data Science:** Machine learning, AI and Generative AI
- **CBAM & Carbon Accounting:** EU CBAM embedded emissions (SEE), CN-code product scoping, default values and mark-ups, GHG Protocol (Scope 1 & 2), emission factors (CEA, IPCC)
- **ESG Reporting & Frameworks:** SEBI BRSR, NGRBC, GRI, SASB, TCFD, ISSB (IFRS S1 & S2)
- **Compliance & Governance:** Internal controls, audit support, regulatory compliance, trade and customs documentation
- **Languages:** English, Hindi, Gujarati (all fluent)

WORK EXPERIENCE

CBAM, ESG & Sustainability Consultant | EcoSetu ESG & CBAM Jan 2026 – Present

Part-time · Hybrid, India · Working at the intersection of ESG domain knowledge and data/software

- Developed a CBAM compliance monitoring and reporting platform for a cement industry association: plants enter monthly fuel, energy, and production data, and the platform calculates emissions, flags data gaps, and produces the annual emissions report.
- Designed the SQL database behind it (SQLite): a register of every figure estimated rather than measured, a meter and calibration register, an approval workflow that blocks months with unresolved issues, and a full audit trail of who changed what, and why.
- Built accuracy safeguards: a second, independent calculation cross-checks the annual figures and blocks any export where the two disagree, physical balance checks catch production figures that look plausible but are wrong, and 1,100+ automated tests guard the numbers.
- Locked every result to the version of the EU rules that produced it, so a 2026 figure can still be explained after the rules change, and loaded the official default values from the European Commission's Excel workbook through a Python ETL.
- Automated the outputs and safeguards: report PDFs and Excel exports, quality checks on every code change (GitHub Actions CI), tested backups, and secure access with user roles, two-factor login, and signed, encrypted data exports.
- Help EU-facing manufacturers turn plant energy, fuel, and production data into defensible CBAM calculations and evidence for their EU customers and the verification process, starting with a gap review of product scope, production data, and emissions information.
- Deliver dashboards, reporting automation, and technical implementation for advisory-led ESG teams.

Compliance & Operations Manager | Entain Jan 2023 – Apr 2026

London, UK

- Built and reviewed MIS reports, KPI dashboards, and performance summaries tracking 10+ metrics across revenue, staffing efficiency, customer activity, and compliance.
- Analysed performance data in Power BI to flag trends, exceptions, and risks for area-level management reviews.
- Ran internal controls, SOP checks, and daily cash reconciliations; supported audits, investigations, and formal reviews, sustaining 100% audit compliance, zero regulatory breaches, and zero cash discrepancies.

- Owned operations and regulatory compliance for two high-revenue retail units in a strictly regulated environment, leading a team of 12+ (recruitment, training, workforce planning); consistently ranked among the top-5 revenue stores in the area.

Proprietor & Export Operations Manager | Keprin Overseas Corporation Mar 2021 – Dec 2022

Bhavnagar, India

- Built and ran an agricultural-commodity export business supplying groundnut (peanut) kernels in Java and Bold grades, and potatoes, to buyers in Nepal and Indonesia.
- Managed the full export cycle (buyer sourcing, pricing and contracts, trade documentation, logistics, and statutory and customs compliance), oversaw quality and consignment readiness, and led a small operations team.

KEY PROJECTS

EcoSetu CBAM Calculator | Creator & Developer 2026

Live: ecosetucbam.streamlit.app · Free public tool that calculates EU CBAM embedded emissions for Indian exporters (steel, aluminium, cement, fertilisers, hydrogen)

- Built a Python ETL (pandas, openpyxl) that loads all 256 official India default values from Implementing Regulation (EU) 2025/2621, reconciled to zero missing and zero extra, with a SHA-256 checksum that detects any change to the data.
- Updated the tool within a month of the EU's July 2026 correction (Reg. (EU) 2026/1740): computed the mark-ups in code (reconciled against the Commission's earlier figures), kept users' saved files working, and cited the new regulation on every PDF and JSON report.
- Implemented the EU calculation method end to end, covering direct (combustion and process) and indirect emissions per tonne of product, protected by 47 automated tests including worked examples (e.g., BF-BOF steel = 2.181 tCO₂e/t).
- Modelled indicative CBAM costs under EU ETS prices of €40–€100, the 2026–2034 phase-in (2.5% to 100%), and free-allocation adjustment; privacy-first, with no login or database.

EcoSetu BRSR Platform | Creator & Product Lead 2026

Live: brsr-tool-msme.streamlit.app · Free BRSR reporting tool built for Indian MSMEs

- Built and launched a tool that turns MSME operating data into bank- and audit-ready BRSR reports across all 9 NGRBC principles in under an hour; 55 sign-ups to its Founding 100 early-adopter programme.
- Engineered the GHG accounting engine (Scope 1 & 2) on CEA V21.0 grid emission factors and IPCC conversion constants, with a published, source-cited methodology.
- Designed tier-aware scoring for Micro, Small, and Medium enterprises, with automated ESG scores, energy, water, and emissions-intensity metrics, and warnings when component figures do not add up to reported totals.
- Built in Python (Streamlit, pandas) with automated PDF reports (fpdf2); deployed on Streamlit Cloud with version control on GitHub.
- Authored all regulatory content (SEBI BRSR, NGRBC, CBAM context) and led the launch, brand, and content strategy.

CERTIFICATIONS

Certified ESG Professional | IIM Bangalore | **Gold Medalist** Jan 2026 – Jun 2026

Data Science, AI & Generative AI | Jason School Pvt Ltd, Pune May 2026 – expected Nov 2026

Advanced Export & Import Management | Digital Exim, Ahmedabad 2021 – 2022

EDUCATION

MSc International Business | Birkbeck, University of London, UK 2023 – 2024

B.Tech, Civil Engineering | IITRAM, Ahmedabad 2016 – 2021
